DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8 and 129, drawn to a method for transporting droplets via a delay line, classified in class 436, subclass 180.
 - II. Claims 9-44 and 76-112, drawn to a method and apparatus for tracking droplets, classified in class 436, subclass 43.
 - III. Claims 45-46, drawn to an atomization analytical method, classified in class 436, subclass 181.
 - IV. Claims 47-63 and 113-128, drawn to a method and apparatus for spooling a laminate and dispensing droplets onto the laminate for subsequent processing, classified in class 436, subclass 44.
 - V. Claims 63-75 and 130, drawn to a system for transporting droplets, classified in class 422, subclass 100.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions all operate by different modes of operation to bring about different effects. Invention I operates to transport droplets via surface tension. Invention II operates to track location of droplets. Invention III operates to

Art Unit: 1743

analyze chemical composition of droplets via atomization and analysis. Invention IV operates to dispense droplets onto a laminate, essentially a coating operation. Thus the independent methods operate by different modes of operation to effect wholly different results of such operation.

3. Inventions I-IV and V are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the system of invention V has separate utility, such as coating or cleaning operations applied to a moving surface. For example, the system of invention IV could be used for spraying a cleaning solution onto a moving conveyer or belt.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
